1047 - Using BI & GIS To Uncover Data Patterns and Relationships

03 DEVELOPING AND MANAGING CADASTRAL DATA

Description:

This session demonstrates data exploration, visualization and analysis capabilities using a powerful BI tool within the context of a real analysis. Dig deeper into your property and sales data to find inconsistencies and anomalies, as well as understand the distributions, patterns, and relationships of important variables that contribute to value within your jurisdiction using interactive graphs, charts and maps.

Start Date: 8/31/2021 4:15:00 PM

End Date: 8/31/2021 5:15:00 PM

Learning Outcomes:

1. Be able to understand Insights as a Spatial and nonspatial BI tool within the context of Assessment offices.
2. Simple and Advanced applications of using Insights to maintain fair and equitable valuations across a jurisdiction
3. Best practice applications and examples using a real analysis in a jurisdiction.

Presenters:

Daniel Fasteen PhD - Aumentum Technologies
